#### Instinct of the Beaver.

INDIANS and mountaineers, from every locality  
where the beaver abounds, report the fact that  
these animals, contrary to their movements for the  
last seven years, are now raising the dams around  
their ancient habitations, more than a foot above  
their former height; and that they have commenc-  
ed their work earlier in the season, by at least six  
weeks, than ever before known. From this fact,  
which is apparent and undisputed, many anticipate  
an early commencement, and a larger quantity of  
rain, and of course snow upon the mountains the  
coming winter, than on any previous one since the  
discovery of gold in California.
